

Title: Product Owner

Description: Create software products to fight Ebola and strengthen health systems

Location: Berlin / Kano

We're an American-Nigerian NGO specialising in the development and deployment of tech for health. Currently one of our main focuses is the development of tools to tackle the Ebola outbreak, help with post-outbreak measures and generally support health in West Africa and Nigeria. Our international software development team of 27 is located in Berlin, with various team members currently on site in Nigeria, Sierra Leone, Liberia and Guinea.

We're currently looking for a **Product Owner** (one year, freelance, full time contract) to join us and work on **outbreak response, nutrition and health system strengthening** products, starting as soon as possible.

Your skills & experience

Required

- Superb communication skills and personal initiative
- Experience working in product design and development, user-centered design
- Experience in one of **informatics, information design, public health, mobile applications**
- Strong analytical and technical skills - software development experience a massive plus
- Experience working in developing, rural or low-literacy contexts
- Willingness and ability to take trips to areas where our products are used (currently Guinea, Sierra Leone, Liberia, Nigeria) and work with diverse stakeholders
- Language Skills: fluent English is a must
- Location: Berlin

Nice-to-have

- Language Skills: German, Spanish and French

Your tasks

- Develop the vision for products which support our software strategy for health system support and communicate this to the software team and stakeholders
- Gather feature / product requirements from stakeholder input and define and prioritize these for the development team
- Coordinate with local partners, governments and users to ensure products effectively

satisfy their needs throughout development

- Ensure that what is being built represents great product design practices, is relevant, effective and focused
- Throughout the product lifecycle, spend a significant amount of time on site – for collecting the first requests, getting feedback and rolling out the product

Sounds good to you? Contact us!
